ADELAIDE

THE UNIVERSITY
of ADELAIDE

Continuing Professional Education and Development in Dentistry

2012 Program

GROUP OF EIGHT
MEMBER

Life Impact | The University of Adelaide

Welcome to CPDent Adelaide 2012

Dear Practitioner,

CPDent Adelaide has just celebrated its first birthday and after a series of successful courses in 2011 is pleased to bring you its 2012 program.

Continuing Professional Development (CPD) became compulsory for dentists, dental prosthetists, dental hygienists, dental therapists and oral health therapists on 1 July 2010 as a result of the introduction of new national legislation. Practitioners in these categories are now required to complete 60 hours of CPD every three years. 80% of those hours must be scientific/clinical. The remainder of the hours may be non-scientific. For details of requirements please refer to the CPD practice guideline of the Dental Board of Australia.

CPDent Adelaide aims to provide CPD to all members of the dental profession, including dental assistants, laboratory assistants, practice managers and laboratory managers, through its range of daytime, evening and online courses.

New for 2012 is the Wednesday Evening Seminar Series covering a diverse range of dental and health topics. Subscribe to one or subscribe to all eight of these seminars which represent great value for money.

The feature events for 2012 will be the Colgate Eminent Lecturer which is being hosted by the Colgate Clinical Australian Dental Research Centre, a 2-day Dental Practice Update at the Adelaide Convention Centre and the Graham Mount Oration.

The CPDent Adelaide Advisory Panel, which represents all major associations and sectors of our profession, hopes that you will find the range of course on offer interesting but is always happy to receive any suggestions you have. Please email dentistry.cpd@adelaide.edu.au

Kind regards,

Professor Johann de Vries
Dean, School of Dentistry

Dr Janet Fuss
Director, CPDent Adelaide

CPDent Adelaide Advisory Panel – people representing your needs!

Dr James Dudley	School of Dentistry, University of Adelaide
Mr Greg Hamlyn	Dental Technician representative

The Human Papilloma Virus and Oropharyngeal Carcinoma	17 October	23
Complications in Implant Dentistry	28 November	24

Dental Sleep Medicine for Dentists

Snoring and Obstructive Sleep Apnoea (OSA) are common medical problems in Australian adults. Where does dentistry fit in?

Find out by joining us to climb the steep learning curve of understanding of the pathogenesis of snoring and OSA, sleep studies, the various forms of treatment of these medical conditions, mandibular advancement splint use and multidisciplinary management.

This course is suitable for dentists as an introduction to this area and will peak your interest in studying this new and interesting area of dentistry further.

The Presenters

Dr Rob Shea graduated in Adelaide in 1978 and has worked in public and private practice around Australia and in the UK in the last 30 years. Rob developed an interest in sleep dentistry 6 years ago and is currently running a public sleep clinic in the Adelaide Dental Hospital and is also in private practice in the sleep dentistry area. Rob has chaired the organising committee of the 3 day Oral Sleep Medicine Course from 2008 to 2010. The inaugural course was initiated by Rob and is associated with the Australasian Sleep Association and The University of Adelaide School of Dentistry. Rob commenced with The University of Adelaide Dental School in 2011 as a senior lecturer developing a Graduate Diploma in Dental Sleep medicine to commence in 2012 in conjunction with the University of Western Australia.

Dr Christopher Pantin graduated in dentistry from the University of Western Australia in 1986. He works in private general dental practice in West Perth, Western Australia and has been actively involved in Dental Sleep Medicine since 1990. A significant part of his current practice is in this discipline. He has a part-time appointment as a Senior Lecturer at The University of Adelaide for the new Graduate Diploma of Dental Sleep Medicine; a dual badged award with the University of Western Australia. Christopher's research interest is the dental side effects of the use of mandibular advancement splints in the management of obstructive sleep apnoea and snoring. He has held office as co-chair of the Orofacial Special Interest Group in the Australasian Sleep Association and is currently a member of the Clinical Committee.

Course Details

Presenters	Dr Rob Shea, Dr Christopher Pantin
Type	Lecture-style course
Date	Tuesday 14 th February 2012
Time	8.45am – 5.00pm Registration from 8.30am
Location	Sebel Playford, North Terrace, Adelaide
Scientific CPD Hours	6
Registration (GST incl)	Dentists \$465 Early Bird Registration prior to 13 January 2012: \$400
Catering	Lunch, morning and afternoon teas included Please phone 08 8313 4052 to advise of special dietary requirements

All registrants will receive confirmation of their registration as well as a reminder with course details one to two weeks prior to the event.

Prevention and Management of Dental Trauma

Dental trauma sadly occurs too frequently in today's fast moving society where hazards of vehicles, contact and non-contact sport, or just bad luck may cause minor or major damage to the beautiful dentitions we have come to expect in our young and many older patients.

This course will consist of a number of in-depth presentations, including videos produced by the Endodontic teaching group at The University of Adelaide on a variety of topics of clinical significance.

These will include prevention, diagnosis and recording, emergency procedures including storage media, splinting, both conventional and a new Adelaide innovation, follow-up management, aesthetic considerations including bleaching and the role of implant therapy. Participants will also be introduced to the latest on-line guidelines into trauma management.

This full-day course is suitable for all clinical dental practitioners. Attendance at the morning session is available to allied health practitioners, school teachers, those who care for children and anyone else needing to know about the prevention of dental injuries.

At the end of the course, participants should

- Be cognizant of the current methods of prevention of dental injuries, including orthodontics, mouth guards and playground equipment
- Recognize the importance of the early management of most dental injuries
- Understand the psychological, pulpal, periodontal and bone responses to various dental injuries
- Know when and when not to treat
- Be aware of the prognosis of various injuries to enhance treatment planning.

This full-day course is suitable for all clinical dental practitioners. Attendance at the morning session is available to allied health practitioners, school teachers, those who care for children and anyone else needing to know about the prevention of dental injuries.

The Presenters

Clin Prof Geoffrey Heithersay AO is a Clinical Professor in the School of Dentistry of The University of Adelaide and has had an active role in research and teaching in Dental Traumatology for many years. A long standing member of the editorial board of Dental Traumatology, the official publication of the International Association of Dental Traumatology, he has recently served on the working party of the IADT's revised guidelines for the management of avulsed teeth.

Awarded an Officer of the Order of Australia for endodontic education in 1998 and the Louis Grossman award of the American Association of Endodontists for research in 2000, Geoffrey also is the recipient of three awards for excellence in teaching; the Faculty of Health Sciences Executive Dean's award, The Stephen Cole the Elder award and The University of Adelaide's Vice Chancellor's award.

Dr Daniel Farmer graduated from The University of Adelaide with his BDS in 1993 and MDS (Endodontics) in 2001. He gained Fellowship to the Royal Australasian College of Dental Surgeons in 2003.

Dan runs a busy specialist endodontic practice and has been a Clinical Lecturer and tutor in endodontics at the School of Dentistry, The University of Adelaide, since 1996. He has lectured locally and interstate in the field of endodontics and traumatology. He is a past president of the SA Branch of the Australian Society of Endodontology and is currently federal president.

Catering Lunch, morning and afternoon teas included for all-day registrants

Morning tea for morning-only registrants

Please phone 08 8313 4052 to advise of special dietary requirements

All registrants will receive confirmation of their registration as well as a reminder with course details one to two weeks prior to the event.

Non-dental registrations – please phone 08 8313 4950

Medical Emergencies in Dental Practice

This comprehensive hands-on, one-day course, which is currently recognised by AHPRA, is designed to give all members of the dental team the confidence, knowledge, skills and understanding needed;

- to recognise serious medical conditions that are likely to be encountered in daily dental practice
- to carry out quick but safe and accurate medical assessments of patients
- to deliver CPR
- to manage medical emergencies.

Course materials and simulation activities are organised in three modules;

- airway and respiratory maintenance using laryngeal mask airways, aspirators, supplementary oxygen therapy and bag and mask ventilation and use of automated external defibrillator
- use of acute care drug kit and managing emergencies in specific medical conditions
- scenarios involving the whole dental team in dealing with medical emergencies in practice.

What sets this course apart from others is the emphasis it places on how to manage the patient, your team and your equipment in providing quick, effective and safe care.

The Presenter

Dr. John Fahey is one of Australia's foremost experts in industrial safety, organisation and management, John works closely with businesses to develop practical solutions to OH&S and emergency response processes. His approach is informed by front line experience and higher level policy perspectives from his time with the ambulance service, the military and in government. John is a driving force behind the simplification of OH&S and first aid training regimes in Australia.

A strong advocate for the reduction of the multiple regulatory regimes afflicting business, he helped found Emergency Care Providers – Australia, towards the goal of one Australian marketplace. It is the first Australian peak body covering first aid and emergency care training and service companies. John serves as Foundation National President.

CYNERGEX GROUP was established by John Fahey in 1995 under the name Incident Training Services to provide "best practice" training in CPR, management of medical emergencies, Advanced Life Support and first aid in the field – for healthcare providers and other industries.

Course Details

Presenter	Dr John Fahey
Type	Small group seminar-style course with hands-on simulation activities. Maximum group size – 20.
Dates	Tuesday, 6 th March 2012 Friday, 9 th March 2012
Time	8.30am - 4.30pm Registration from 8.00am
Location	WP Rogers Room, Union House University of Adelaide Campus, North Terrace, Adelaide
Scientific CPD Hours	6.5
Registration (GST incl)	Dentists \$500 Dental Hygienist, Dental Therapist, Dental Prosthetist \$400 Dental Assistant, Practice Manager \$300 Dental Technician, Laboratory Assistant, Laboratory Manager \$300
Catering	Lunch, morning and afternoon teas included
	Please phone 08 8313 4052 to advise of special dietary requirements

Following the course all registrants will receive a certificate of completion. The certificate is a Nationally Recognised Statement of Attainment in Apply Advanced Resuscitation Techniques (HLTFA404A) which includes CPR. Certificates expire after 12 months.

On-site Training

For practices wishing to train six or more staff Cynergex offers cost-effective on-site training.

Contact Cynergex direct on 1300 793 649 for information and bookings for early March and mid-September 2012.

Refresher Courses

Refresher training is required annually. A discount is given to practices that complete refresher training within 12 months of the initial course.

Contact Cynergex direct on 1300 793 649 for information and bookings.

Equipment available through Cynergex

Dentists who have completed this day course successfully can purchase the following equipment for their practice directly from Cynergex (invoice and paid before delivery);

Dental Emergency Pack
ADA Oxygen Equipment (single bag with regulator)
Semi-Automatic External Defibrillators
Pulse Oximeter

Contact Cynergex direct on 1300 793 649 for information and orders.

Executive Education THE UNIVERSITY of ADELAIDE

The Executive Education Unit specialises in building on the technical expertise of middle and senior managers with programs designed to expand the core management capabilities needed by all leaders. We offer the latest in management theory and practice through dynamic, interactive programs to managers from commerce, government and industry.

Understanding and Analysing Financial Information

This stimulating hands-on course will provide you with the tools and techniques of financial analysis when making critical management decisions such as resource allocation or performance evaluation. You will be able to interpret balance sheets and operating statements and gain an insight into how business decisions affect them. In summary, this course will help you to make better financial decisions for your organisation.

Leading and Managing People

This course will enable you to motivate your people to perform at their best and achieve desired organisational outcomes. It will impart valuable skills and knowledge to inspire and maintain your people's commitment to achieve your organisation's objectives.

For the full range of courses visit: <http://www.adelaide.edu.au/professions/execed/>

Capture the Perfect Smile

Are you using patient photography to its fullest but not satisfied with the results? Do you use your clinical photographs only for treatment planning and patient records? Then you are missing out on an excellent opportunity to show off your great work.

You will be amazed how easy digital photography can be learned and immediately incorporated into your practice. During this course you will learn;

How to Choose Cameras and Accessories

- What is the best camera for dental photography? Decide which digital camera is best suited for your practice and see which retractors, mirrors, backgrounds and gadgets make clinical photography easy.

Techniques for Standardized Photography

- Exposure calibration and camera set up
- Standardized patient photography with mirrors and retractors
- Clinically correct views, using the right retractors and mirrors
- Photography of study models
- Portrait techniques

Digitizing Radiographs, Plaster Cast and Illustrations for Case Presentations

- Photographing radiographs and illustrations from books instead of scanning
- Photographic techniques to capture all relevant material with your digital camera

The Presenter

Ms Rita Bauer has become recognised as a leading authority on integrating digital photography in the Dental Practice. During her 25 years as medical photographer and manager of Photographic Services at the University of Toronto she has trained thousands of dental professionals presenting over 700 lectures and workshops.

For her efforts to the dental community she has received Honorary Memberships as a Fellow of the International College of Dental Surgeons and the Omicron Kappa Upsilon Honor Dental Society.

Her enthusiasm for the subject is infectious and in her fun filled lectures she transforms inexperienced photographers into enthusiastic, competent digital camera users and gives experienced photographers plenty of tips to make a difference in their daily routine.

Course Details

Chair	Janet Fuss
Presenter	Rita Bauer
Type	Lecture-style with hands-on session
Date	Monday, 16 th April 2012
Time	8.45am – 5.00pm Registration from 8.30am
Location	Sebel Playford, North Terrace, Adelaide
Scientific CPD Hours	6
Registration (GST incl)	\$600 – all participants
Catering	Lunch, morning and afternoon teas included

Please phone 8313 4052 to advise of special dietary requirements

Book early!! Places strictly limited to 20 Participants.

Participants are encouraged to bring their digital clinical camera, fully charged batteries and camera instruction manual.

All registrants will receive confirmation of their registration as well as a reminder with course details one to two weeks prior to the event.

COMMUNITY OUTREACH UPDATE

The School of Dentistry, in collaboration with the Medical School, was successful in securing a Commonwealth grant along with financial support and supply of materials from several dental companies. These funds and support were sufficient to establish a Dental Clinic in the new Common Ground complex on Light Square in the Adelaide CBD. Common Ground provides tiered accommodation for people who are residentially and socially disadvantaged, providing an opportunity to rebuild healthy communities with specific support systems in place. The new Common Ground complex includes accommodation, a dental surgery, allied health rooms and conference/meeting rooms.

The School of Dentistry encourages a strong advocacy for equity and provision of appropriate dental care for the entire community. Through a multidisciplinary approach and collaboration with the ADASA, DHAA(SA), SADTA and Dental Laboratories the School is working to provide care for the residentially and socially disadvantaged.

Since 22nd September the School of Dentistry, its wonderful volunteer dentists and assistants, and students have provided dental care for some 40 individuals who otherwise would have no access to dental care.

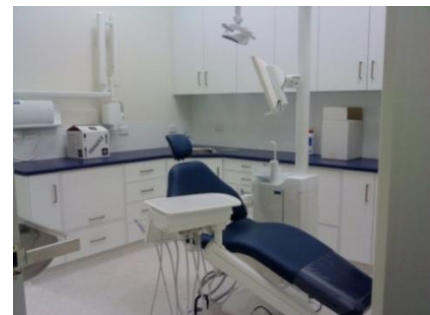

As the Community Outreach Program moves into 2012 it is looking at means of creating sustainability and increased services for these *pro bono* services that benefit both our future workforce and the wider community.

You might like to consider what support you could offer the Community Outreach Program.

Margie Steffens

Getting Started in Dental Implants

Nobel Biocare Level 1 Implant Course

Designed for the clinician and dental technician with minimal or no experience with dental implants, or for those wishing to refresh and update the basics, this one-day CPD course is proudly brought to you by **Nobel Biocare** through CPDent Adelaide.

Well-known and respected specialist Prosthodontist from New Zealand, **Dr Andrew Cautley**, will explore the current concepts in dental implants and discuss some of the more topical issues. Hands-on exercises and demonstrations will enable participants to experience restorative solutions.

The Program

The morning lecture program will cover what every clinician and dental technician should know about implants, single tooth implants and NobelProcera for teeth and implants.

In the afternoon, a discussion of immediate restoration, mini-implants and 'pushing the implant envelope' will be followed by hands-on experience of impression taking and construction of immediate temporary crowns.

The Presenter

Dr Andrew Cautley graduated with a BDS in 1983 and MDS in 1991 from The University of Otago. He spent several years teaching at Otago before moving to Nelson, New Zealand in 1994 to set up his own specialist practice focussed on fixed prosthodontics and implants. Andrew has been a part-time Consultant in Prosthodontics at Hutt Hospital, near Wellington, since 1999. He is a member of the Academy of Australian and New Zealand Prosthodontists and the New Zealand Association of Prosthodontists and Restorative Dentists. He has lectured widely in Australia and New Zealand on introductory, intermediate and advanced level implant topics.

Course Details

Presenter	Dr Andrew Cautley

Registration (GST incl)	Dentists \$600 Early Bird Registration prior to 7th March 2012: \$520 Dental technicians \$450 Early Bird Registration prior to 7th March 2012: \$400
Register for <u>both</u> Level 1 and Level 2 implant courses and receive a discount!	Dentists \$1100 Early Bird Registration prior to 7th March 2012: \$940 Dental technicians \$900 Early Bird Registration prior to 7th March 2012: \$700
Catering	Lunch, morning and afternoon teas included Please phone 08 8313 4052 to advise of special dietary requirements

Book early!! Course will be limited to 20 participants.

All registrants will receive confirmation of their registration as well as a reminder with course details one to two weeks prior to the event.

Expanding Restorative Treatment Options for Single Units and Partially Edentulous Arches

Nobel Biocare Level 2 Implant Course – Preliminary Notice

Designed for clinicians and dental technicians who want to offer state-of-the-art implant-based restorative dentistry. This course extends the concepts covered in the Nobel Biocare Level 1 implant course to restoration of immediate and short-span partially edentulous cases.

Completion of the Level 1 Implant course or a minimum of 20 restored implant cases are the pre-requisites for this Level 2 course.

This one-day CPD course is proudly brought to you by **Nobel Biocare** through CPDent Adelaide.

The Program

This course guides participants through digital diagnosis and treatment planning, CAD/CAM solutions, multiple considerations when developing the implant site and implant design considerations.

Utilising a restorative perspective, participants will learn appropriate sequencing and a systematic approach to treatment planning. Abutment types and design, loading, and provisional restoration options and their impact on soft tissue management will be thoroughly discussed.

Hands-on exercises and demonstrations will enable participants to experience restorative solutions, while discussions of case studies will explore the science behind concepts taught.

The Presenter

Dr Andrew Cautley graduated with a BDS in 1983 and MDS in 1991 from The University of Otago. He spent several years teaching at Otago before moving to Nelson, New Zealand in 1994 to set up his own specialist practice focussed on fixed prosthodontics and implants. Andrew has been a part-time Consultant in Prosthodontics at Hutt Hospital, near Wellington, since 1999. Periodontics Workshop – Preliminary Notice

This limited participation course is a day of interactive seminars including some hands-on instrumentation exercises. Course registrants will work closely with the presenter and will be asked prior to the course to identify specific topics for discussion.

Participation - limited to 15 participants.

More information to follow.

The Presenter

Dr Bryon Kardachi graduated with Honours in the Bachelor of Dental Surgery and Master of Dental Surgery in Periodontics from The University of Adelaide. He has lectured extensively throughout Australia and in the United Arab Emirates. Bryon is a member of and has served as President for both the Australian Society of Periodontology (SA Branch), and the Australian and New Zealand Academy of Periodontology. He continues to practise as a specialist periodontist and is a well-respected clinical supervisor of postgraduate students studying periodontics at The University of Adelaide.

All registrants will receive confirmation of their registration as well as a reminder with course details one to two weeks prior to the event.

Ceramics - What You Need to Know

Ceramic materials have the potential to be the most aesthetic and conservative of all indirect restorations. But which ceramic should we be using - zirconia, alumina, dilithium silicate or feldspathic?

Other questions that this course will consider ...

Whether posterior or anterior, will ceramics last? When should we use a bonded ceramic? What are the rules for bonding ceramics? Should facings, crowns and inlay/onlays be bonded the same way and with the same cement? Will bonding protect teeth and ceramic from fracture? How should we prepare the teeth? When should we opt for a crown, a veneer or a creener? When is an inlay best and when should we cap cusps? What do we need to change for Digital Dentistry?

This lecture course will help you;

- Resolve which ceramic system you should use
- Recognise the bonding technique that matches the restoration
- Know when ceramic veneers will work and when they won't
- See advantages of extended veneers (creeners)
- Determine when to do crowns and when they should be all-ceramic
- Realise when to consider ceramic inlay/onlays.

The Presenter

Dr David M Roessler is a Prosthodontist and Supervising Specialist Clinical Consultant of The Dental Specialists, a multidisciplinary specialist team, in Sydney. He has been a Keynote Speaker at many conferences, has given more than 500 lectures and hands-on courses in almost every facet of restorative, fixed and removable prosthodontics, aesthetic and implant dentistry around the world.

David has authored numerous publications and is an invited lecturer and examiner to undergraduate and graduate students at a number of Universities, is an Examiner for the RACDS, and is Clinical Editor for Australasian Dental Practice magazine. He is also the CEREC trainer for Australia and New Zealand, and is a consultant and a trainer for a number of dental companies.

As a prosthodontist, David has seen where treatment goes wrong in both the difficult and seemingly easy situations. He treats patients with the highest expectations and has learnt from his own mistakes and those of others. Most importantly, David insists that dental education should be enjoyable! His unique mix of education and entertainment always leaves the audience wanting more. His unbiased clinical orientation and command of the literature combine with his practical approach and ability to communicate in order to simplify complex problems. His ultimate objective is that you will immediately be able to apply what you have heard.

Dental Practice Update 2012

Preliminary Notice

Keynote Speaker

Professor William Scarfe graduated from the University of Adelaide, Faculty of Dentistry (1982) and is well known to many South Australian practitioners. Bill was awarded Fellowship in the Royal Australasian College of Dental Surgeons (1986) and completed his specialist training in Dental Diagnostic Science at the University of Texas Health Science Center at San Antonio (1992). He was appointed at the University of Louisville in Kentucky in 1993 and is a Diplomate of the American Board of Oral and Maxillofacial Radiology. He has been Vice-President and North American Regional Director of the International Association of Dento-Maxillofacial Radiology, and recently Treasurer and Chairman of the Finance committee of the American Academy of Oral and Maxillofacial Radiology.

Bill is active in research on the clinical applications of Cone Beam CT. He is a specialist oral and maxillofacial radiologist and Co-director of Diagnostic Maxillofacial Imaging University Associates a University of Louisville-based cone beam imaging facility. He is currently Editor, Radiology Section of the journal Oral Surgery, Oral Medicine, Oral Pathology, Oral Radiology and Endodontics.

Wednesday 16 May Colgate Eminent Lecturer

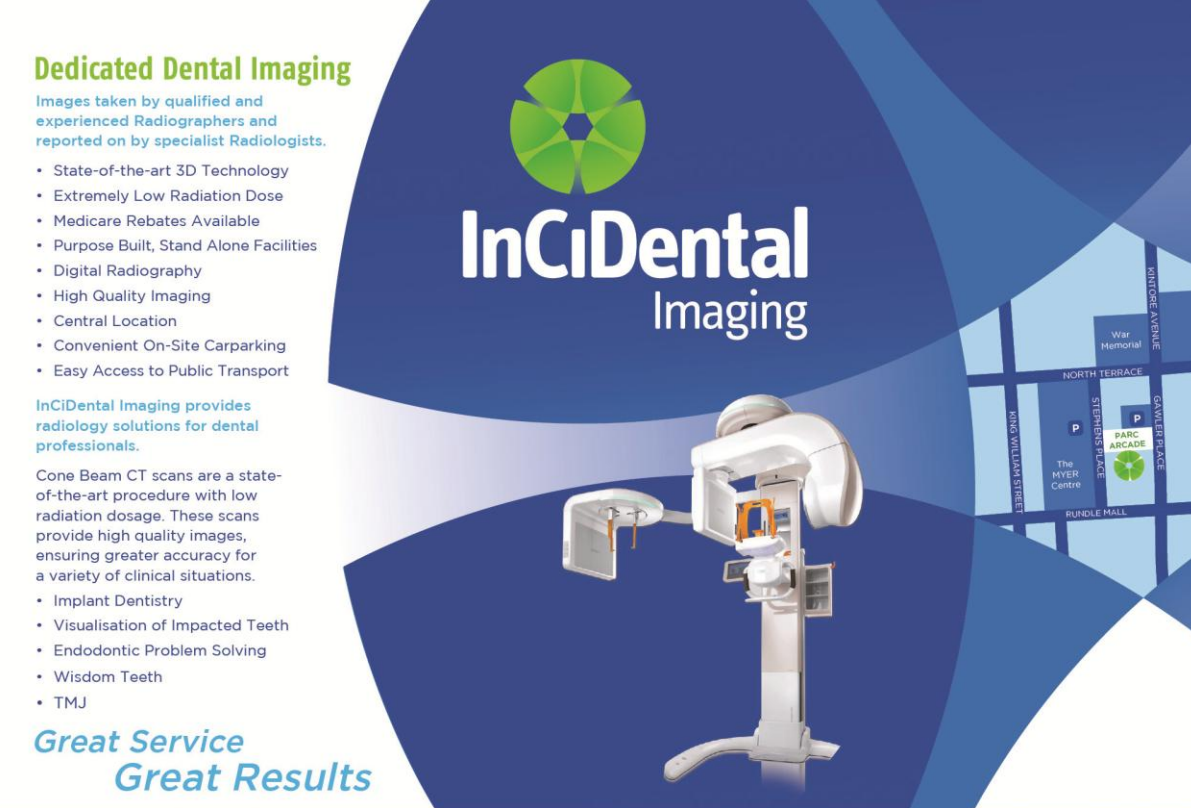

Offered by the Colgate Australian Clinical Dental Research Centre
Professor Mariano Sanz from University Complutense in Madrid, Spain

Current knowledge on the pathogenesis of chronic periodontitis has re-defined our therapeutic approaches in the treatment of chronic periodontitis. Our current knowledge on dental biofilms and specifically on the subgingival biofilm has focused on the importance of mechanical debridement, using new technologies (lasers, power driven devices) as well as new therapeutic regimes (e.g. full mouth disinfection). Similarly the use of microbial diagnostics in specific patient categories has re-focused the adjunctive use of antimicrobials. In this presentation we shall review the evidence on the use of these therapies and we shall present representative clinical cases highlighting the importance of adequate diagnosis in the treatment planning. We shall also cover the issue of infection control in periodontal susceptible patients with implant-supported restoration, highlighting the differences and similarities between the periodontal and peri-implant lesions.

The Graham Mount Oration 2012

Preliminary Notice

The Orator

Dr Elizabeth Coates graduated from the University of Adelaide, Faculty of Dentistry with a Bachelor of Dental Surgery in 1970 and with a Masters degree by research in the area of oral pathology in 1998. She was awarded Fellowship in the Royal Australasian College of Dental Surgeons in Special Needs Dentistry in 1990.

Liz is a consultant to, and has previously been the Director of, the Special Needs Unit at the Adelaide Dental Hospital; a unit that manages the oral health needs of patients with serious medical problems. She has provided clinical care, researched, published and lectured extensively in the fields of HIV, hepatitis C and dry mouth.

Liz has been extensively involved in the area of infection control, being Chairperson of AMADA from 1996 – 1998 and serving on the Australian Dental Association Infection Control committee; Vice Chairperson 1996 – 2002 and Chair 2003 – 2006. She is also a Fellow of the International College of Dentists, The Pierre Fauchard Academy and The Academy of Dentists International, and was awarded the Distinguished Alumni Award of The University of Adelaide in 1994.

Oration Details

Orator	Dr Liz Coates
Dates	Friday, 21 st September 2012
Time	6.00pm start
Location	Sebel Playford, North Terrace, Adelaide
Scientific CPD Hours	1 hour
Registration	Free

The oration is open to all members of the dental profession as well as to members of the public.

Registration is required.

All registrants will receive confirmation of their registration as well as a reminder one to two weeks prior to the event.

Orofacial Pain

Preliminary Notice

Every day in clinical dental practice we see patients present with pain. Pain can arise from a variety of sources and can sometimes be difficult.

An understanding of the aetiology, origins and nature of pain in the orofacial region and the underlying mechanisms are crucial for correct diagnosis and patient-specific, evidence-based management.

Update your scientific knowledge base and improve your understanding of orofacial pain by attending this engaging one-day course. Professor Benoliel will explore a number of key areas;

- pathways and mechanisms of pain
- analgesics – selection, mode of action and efficacy
- trigeminal neuralgia and other orofacial neuropathies – symptoms, diagnosis and management
- traumatic trigeminal neuropathy - aetiology, including iatrogenic, diagnosis and methodologies for assessing nerve damage
- differential diagnosis of neurovascular headaches and orofacial pain
- chronic muscle pain – signs, symptoms, pathophysiology, predisposing factors, and management

Presenter

Professor Rafael Benoliel graduated BDS from the University of London in 1981 and undertook specialist training in Oral Medicine at the Hebrew University, Jerusalem 1984-1988 where he is currently an Associate Professor in Oral Medicine in the Faculty of Dental Medicine. He is also an Adjunct Professor of Oral Medicine at the University of Medicine and Dentistry, New Jersey.

Rafael has held numerous research grants and his research interests are the clinical syndromes of chronic orofacial pain, the relationship between headaches and oral pain, experimental models of trigeminal pain and neuropathic pain mechanisms. He is also on the editorial boards of Quintessence International and the Journal of Oral Rehabilitation.

Rafael is a member of the Israel Dental Association, the Israeli Oral Medicine Society, the American Academy of Orofacial Pain, the International Headache Society and the International Association for the Study of Pain for which he has been on the Scientific Program Committee for two World Congresses. He has spent a number of years as the Director of the Walter D Cohen Middle East Centre for Continuing Dental Education and has lectured extensively in his field nationally and internationally.

Nutritional Treatment of Cardiovascular Disease

Cardiovascular health and diet are of interest to you, your staff, patients, family and friends. Are your knowledge and understanding current? How do they stack up against recent evidence? Come along and find out.

Saturated fat lowering has been regarded as the primary nutritional intervention for prevention of cardiovascular disease (CVD) for the last 40 years but this has come under challenge in the last two years. It has been proposed that benefit will only occur if polyunsaturated fat replaces saturated fat and that carbohydrate is of no value or even may be detrimental. High fibre diets, whole grain diets and low glycaemic index diets are associated with lower rates of CVD but there are no intervention studies to support the epidemiology. Plant sterols lower LDL cholesterol by 10% or so but in the absence of hard end point trials doubt has been raised because of the small elevation of plant sterols in blood. It has been suggested that plant sterols may be even more atherogenic than cholesterol but there are no data on this point.

The Presenter

Professor Peter Clifton joined Baker IDI in July 2009, He has been a high profile clinical and nutrition researcher for over 20 years with CSIRO. Peter's primary research interest is in the prevention and treatment of cardiovascular disease and its risk antecedents, obesity and diabetes, by dietary means.

Peter maintains a clinical practice in the specialty of lipid management at Flinders Medical Centre since 1987 where he completed his PhD in "Factors affecting HDL particle size distribution". He also holds a clinical position at The Royal Adelaide Hospital specialising in the management of diabetes and cardiovascular disease. Both these positions are unpaid and reflect his commitment to continuing patient care and to the application of research to clinical practice.

Peter has also produced numerous articles for newspapers, medical magazines, discussion papers for food companies and books for the public - he co-authored the "CSIRO Total Well-being Diet" which has been on the best seller list in Australia. He is on the editorial board of 4 journals, reviewer for 20 others and reviewer for granting bodies in Australia, NZ, South Africa, Israel and Austria.

Coke and Ice : The Impact of an Illicit Drug Cocktail

Coke and Ice : The impact of an Illicit Drug Cocktail : Methamphetamine Ecstasy and Cocaine are all CNS stimulant drugs, which have important social, medical and dental repercussions. I will examine the latest figures for incidence of use, the history and origins of the drugs and the effects and impacts for systemic health. The dental consequences and implications for treatment will be discussed and I will highlight some of the signs that indicate drug use.

Oral Piercing as a Whole : What Can go Wrong?

Oral Piercings as a whole. What can go wrong? Oral Piercing has become very popular but there are many associated risks to the tissues of the oral cavity, both short and long term. I will examine the procedures involved in piercing, the common sites involved and the complications to both soft tissues and the dentition. It is important that dentists are fully informed, so they can give patients appropriate advice about these risks.

The Presenter

Dr Bronwyn Scopacasa graduated with a BDS from The University of Adelaide in 1978 and became a Fellow of the Royal Australasian College of Dental Surgeons in 1983 (general stream).

Bronwyn has worked in the Special Needs Unit at the Adelaide Dental Hospital, SA Dental Service since 1998, working with patients who have Hepatitis C, HIV, head and neck cancer, bleeding disorders, organ transplants and major cardiovascular abnormalities. During this time Bronwyn has developed a particular interest in treating patients with hepatitis C and have

been on the SA Hepatitis C Subcommittee and involved with the SA Hepatitis C Network. She also has an interest in oral piercing and has lectured to many groups about the complications associated with oral piercing.

Bronwyn has been a clinical tutor and a laboratory tutor with the School of Dentistry, the University of Adelaide, and was appointed a Clinical Director at the Adelaide Dental Hospital in 2010.

Diabetes : The Whole Story

Periodontal disease and diabetes are common chronic conditions which have a bidirectional relationship with each other. These diseases share common inflammatory pathways and the treatment of one affects the other. Many patients will attend dental practices having already been diagnosed with diabetes and there are some important facts that all providers of oral health care should know so they can educate their patients well and confidently, and provide appropriate care.

Evidence has been mounting about the common links between these diseases;

- Patients with diabetes are much more likely to have severe periodontal disease
- Diabetic patients with untreated periodontitis are more likely to suffer serious medical complications such as kidney disease
- The scientific data suggest that treating periodontal disease makes a significant contribution to the glycaemic control of diabetic patients
- Untreated periodontal disease may contribute to insulin resistance and diabetes
- Diagnosis of problems with glucose metabolism from oral signs is increasingly becoming likely and important.

All providers of oral health care should be proactive in the care of diabetic patients and form a very important part of the multidisciplinary care of patients with prediabetes and diabetes.

An overview of diabetes, its oral signs and symptoms, and clinical hints will be presented based on scientific evidence with an emphasis on patient care in the dental practice setting.

The Presenter

Dr Jane McCarthy graduated from the University of Sydney with a Bachelor of Dental Surgery (Hons) in 1984. For the next six years she worked in private practice in Victoria and overseas. After lecturing in restorative dentistry at The University of Western Australia 1990-1991, Jane undertook a Master of Dental Science in Periodontics in Melbourne. Following this she spent time undertaking research as a Postdoctoral Fellow at Indiana University, USA and teaching clinical periodontics and implantology.

Jane spent several years working in a private periodontics practice before setting up her own specialist practice, Applecross Periodontics, in Perth in 1997. She has presented to numerous dental groups, societies and educators. Her special interests are periodontal disease and diabetes, recession, gingival grafting, dental implantology and pre-orthodontic surgery.

Antithrombotics: Old Favourites and Emerging Options

With the increasing complexity of cardiovascular conditions and co-morbidities, the use of antiplatelet and anticoagulant drugs is becoming more widespread. This is currently paralleled with an increasing array of antithrombotic therapeutic options.

This presentation will explore the role of existing and emerging antithrombotics, their relative safety and efficacy and their impact upon patient care and dentistry practice.

The Presenter

Joy Gailer is a senior pharmacist with the Drug and Therapeutics Information Service (DATIS) at the Repatriation General Hospital, South Australia. Her role involves providing balanced therapeutic advice to medical practitioners and other health professionals via educational visits and telephone based therapeutic advice, as well as the development of evidence-based therapeutic reviews. She is actively involved in pharmacy and medical education through the NPS, the Society of Hospital Pharmacists of Australia and the Pharmaceutical Society of Australia.

Joy is an associate lecturer with the Masters of Clinical Pharmacy at the University of South Australia, and is a Board Certified Pharmacotherapy Specialist (USA). She also provides Home Medicines Review and Residential Medication Management Review services.

Antibiotics in Dentistry

In this presentation we will review current concepts regarding antibiotic usage and the ways that they are misused. The current prophylactic guidelines will be discussed with a look to the future as to how these may continue to evolve. Recently introduced antibiotics, their use and indications will be discussed.

The Presenter

Dr Paul J Sambrook graduated from The University of Adelaide with his BDS in 1985, MDS (Oral Surgery) in 1990 and MBBS in 1993. He gained Fellowship to the Royal Australasian College of Dental Surgeons, Section of Oral and Maxillofacial Surgery in 1990.

Paul is the Director of the Oral and Maxillofacial Surgery Unit, SA Dental Service/Royal Adelaide Hospital/The University of Adelaide, and is the group leader of Oral and Maxillofacial Surgery and Special Needs Dentistry at the School of Dentistry, The University of Adelaide, since 2009 where he is currently the Assistant Dean Learning and Teaching (Undergraduate). He is also a Visiting Consultant to a number of major public hospitals and runs a busy specialist practice in Adelaide.

Paul has been and continues to be heavily involved with the RACDS: his current roles include Director of Training (South Australia) and Chair of the Board of Studies (OMS). He is a past president of the Australian and New Zealand Association of Oral and Maxillofacial Surgery and is currently a member of the executive committee of the International Associations of Oral and Maxillofacial Surgery. Paul is also a member and fellow of a number of professional associations, and has lectured locally, nationally and internationally in his discipline.

“What I have Learnt that has Changed the Way I Treat Children”

Do you work with children and wonder how it can be an easier and more enjoyable experience for all? If yes, this evening seminar is for you!

These presentations will review and update the audience on many aspects of paediatric dentistry and will be valuable for all members of the dental team who work with children. They will provide you with insight into aspects of care that have shaped the way Associate Prof Sam Gue manages children.

In 13 years of working with children in private dental practice as well as children’s hospitals, Sam has encountered many challenges that have led to changes in how he treats children - all of which he says have resulted in more successful outcomes. A happy child and parent can result in satisfying and enjoyable experiences for everyone involved. Equally rewarding are the successful clinical outcomes that follow.

A happy and positive experience is the key to each child developing a confident attitude towards oral health.

The Presenter

Associate Professor Sam Gue completed his BDS at The University of Adelaide in 1997 and his MDS in specialist Paediatric Dentistry at the University of Sydney in 2001. In 2002 he was appointed staff specialist at Westmead Hospital, Sydney and two years later he was appointed as Head, Department of Paediatric Dentistry, Women’s and Children’s Hospital, Adelaide and Head, Discipline of Paediatric Dentistry, University of Adelaide.

In 2009 Sam was jointly appointed as Associate Professor in Paediatric Dentistry at the Women’s and Children’s Hospital and The University of Adelaide. He was admitted as a Fellow of the Royal Australasian College of Dental Surgeons in 2001 and later admitted as the inaugural Fellow in the special stream of Paediatric Dentistry in 2005. Sam was admitted as a Fellow of the International College of Dentists in 2008. In addition to his hospital and university commitments, he maintains a busy solo specialist private practice in Adelaide.

The Human Papilloma Virus and Oropharyngeal Carcinoma

This presentation is of important to any health professional with an interest in the role of the human papillomavirus (HPV) in oropharyngeal squamous cell carcinoma.

Molecular evidence suggests a role for HPV in the pathogenesis of oropharyngeal squamous cell carcinoma. Oral cancers most closely related to HPV infection include those in the base of tongue, tonsils and other oro-pharyngeal sites.

This presentation will describe how HPV related oral cancers appear to be occurring at younger ages and are increasing in incidence compared to alcohol and/or tobacco related oral caners; the incidence of tonsillar cancer having increased dramatically.

Epidemiologic data has been inconsistent and less rigorous than the molecular evidence. Strong epidemiologic data would provide additional support for a causal association between HPV and oropharyngeal cancers and might guide future cancer-prevention programs including vaccination to prevent oral HPV infection or screening to detect it.

The Presenter

Dr Sharon Liberali completed an undergraduate dental degree at The University of Adelaide in 1986 and was awarded a Doctor of Clinical Dentistry in Special Needs Dentistry at The University of Adelaide in 2009. She is a Fellow of the Royal Australasian College of Dental Surgeons in the special field of Special Needs Dentistry, and in 2011 was admitted as a Fellow of the International College of Dentists.

Sharon is the Director of the Special Needs Unit, Adelaide Dental Hospital, SA Dental Service and a member of the Clinical Senate which plays an advisory role to the Department of Health in South Australia. Sharon holds an honorary Associate Dental Consultant position at the Royal Adelaide Hospital and is a Clinical Lecturer in the School of Dentistry, Faculty of Health Sciences, The University of Adelaide. She is currently President Elect of the Australian and New Zealand Academy of Special Needs Dentistry.

Complications in Implant Dentistry

The placement and restoration of dental implants is becoming standard practice in dentistry. Implant dentistry is being promoted as predictable and trouble free. However, it is now becoming clear that complications do occur and due to the sheer number of implants being placed, this has resulted in most dentists being exposed to these problems in their daily practice.

This presentation will cover the common surgical and biological complications likely to be encountered by the general dentist, and ways you can approach these complications in your own practice.

The Presenter

Dr Jessica O'Neill graduated as a dentist from the University of Sydney and spent several years in a large teaching hospital before heading to England to work in a surgical training post. Subsequently she returned to Australia to work in private practice in Sydney and to specialist studies and obtained a Doctorate in Clinical Dentistry (Periodontics). During her time as a postgraduate student she received several awards and scholarships.

Jessica is a lecturer and clinical educator in Periodontology at the University of Sydney and she also treats patients in a specialist periodontics practice, SydneyPerio. She has been awarded membership of both the Royal Australasian College of Dental Surgeons, and the Faculty of Dental Surgeons at the Royal College of Surgeons Edinburgh. She is an executive member of the Australian Society of Periodontology and the Australian Osseointegration Society, and has lectured in periodontics nationally and internationally.
